Personal Summary

Final-year Bachelor of Commerce student in International Business, graduating in November 2026 and interning at Lazard Asset Management across business analysis, data and business systems. Helped automate monthly client reporting, cutting compilation from about two weeks to about six days, and built an AI checking app, now in production, that cut checks from about an hour to about five minutes. Focused on understanding how a team works, then building practical fixes for what slows it down. Seeking a graduate business analyst or data analyst role, available from mid-January 2027.

Experience

Lazard Asset Management, Sydney March 2026 – Present
Intern: business analysis, data and business systems

- Talk to teams about what they need, run reports and handle ad hoc requests.
- Joined as the team began automating monthly client reporting and helped finish the system of around 200 Excel master files, cutting the full line of reports from about two weeks to about six days, run by one person instead of two.
- Took over building new master files end to end from about September 2026.
- Built checks into each file's transformation, such as flagging unassigned securities and confirming weights total 100%, helping far fewer reports come back with errors.
- Worked with the product and sales teams to understand their manual checking, then built an AI checking app that went from prototype into production, cutting checks from about an hour to about five minutes.
- Use Snowflake with the team for data storage and containers, so our apps can access each other's data.
- Helped wireframe ideas with the sales team for others to build, including a tool to replace most Salesforce work.

Fat Pomelo, Waiter, then Floor Manager Early 2025 – December 2025

- Led the service process and helped plan each evening, including seating and customers.
- Covered reception, the bar, the pass and the floor as needed, helped restock, and settled staff disputes.

Frankie's Food Factory, Waiter Early 2024 – Early 2025

Waterfront Cafe, Waiter 2022 – 2023

Projects

AI factsheet checker Lazard Asset Management, 2026
Claude Code, Python, VS Code, multi-agent workflows, prompt design

- Designed three AI agents: a visual agent for spelling, formatting and layout, a period agent that judges changes from the previous period, and a raw data agent that checks output against source data.
- Had the agents question each other before reporting, filtering out false alarms and returning one list: fine, look at, fix.
- Removed the need to search five or six raw data sources by hand; refined each version with the product team.

Monthly client report automation Team project, March 2026 onwards
Microsoft Excel, VBA macros, formulas, dynamic named ranges

- Each master file pulls in source data with one click and uses a dynamic named range so no data is missed.
- Produces factsheets, decks, holdings documents, and performance and attribution reports as drafts to finalise.

Education

Bachelor of Commerce, International Business Graduating November 2026
Macquarie University, Sydney

- Covered culture, international operations, and people and team management, with extensive team projects.
- Foundation-level understanding of accounting, finance, marketing and economics.

Skills

Data and automation: Excel automation, formulas and VBA macros, dynamic named ranges, built-in data checks
AI: Claude Code, multi-agent workflows, prompt design, AI app design
Platforms: Snowflake, Azure, Microsoft Office, Coder
Currently learning: SQL, Python
Business: Business analysis, wireframing, people and team management, cross-cultural communication
